GMX - INSTRUCTIONS FOR USE

- ** New battery may be partially charged, fully charge before use
- ** Ensure spray switch connected inside control box (see maint-page 2)
- 1) Ensure power turned off on both pump isolator switch (on control panel) and spray switch (on handle bar).
- 2) Unplug and remove 2 x connectors (top of paint tank). Remove paint tank (using front and rear recesses) by lifting out back first, then the front.
- 3) Make up paint mix (using paint concentrate and water) using **only Bowcom** paints. Pour into tank through integral basket filter.
- **4)** Replace paint tank lid and place onto GMX machine, re-connecting both plug-in connectors (ensure matching sides-colour coded).
- 5) When closing bonnet with connectors attached to tank, carefully push surplus hose down back of tank to avoid restricting bonnet closure.
- **6)** Fill cleaning bottle with tap water (located on top of control panel).
- 7) Ensure direction tap is set to **Paint** and recycle tap is set to **spray**.
- 8) The machine is now ready to mark a line.
- 9) Set the spray limit plates to the required line width. Ensure that the spray gun is set high enough for the paint spray to hit the limit plates.
 - **NB.** To locate the spray head inside the frame use the right-hand stub (from behind machine)
 - To locate the spray-head outside the frame use the left-hand stub (from behind machine)
 - **NB.** For offset (left or right side) spray marking use the extended spray bar (optional extra).
- **10)** Turn on the pump isolator switch (located on control panel) observe the volt meter reading (12 volts). If too low, place battery on *charge.**
- **11)** To activate pump, use the button located on the handle bar. This can be used in the *locked-on* position or *Hold-position* (using a light finger touch).
 - **NB.** The push button spray switch is positioned on the right side of the handle, this can be moved to the left side if required.
- **12)** *To clean the machine*: Turn off pump. Turn the paint/water tap to *water* (located next to the water bottle inside control box).

- **13)** Turn on paint spray switch (as when spraying paint) and water will appear at the nozzle. On sight of water, turn off. Also spray water whilst on the *re-cycle* mode (to clean re-cycle pipes). Remove and clean top-hat filter inside spray head above the nozzle.
 - **NB.** A full water bottle should equal approx. 3 x cleans.
- **14)** Should paint be left in the paint tank overnight, it can be agitated by using the **recycle** option on the tap inside the control box (to the right of the pump). Turn pump on as normal and the paint will re-circulate back into the tank. Turn off when fully re-mixed.
- **15) NB.** For ease & weight of transporting the GMX, remove paint tank (if full). When disconnected, always place the tank connectors into the slots provided on underside of bonnet.
- * NB. Battery Charger

 Use Battery Charger provided. Place 3-pin plug into 240 volt mains socket. Plug other end (12 volt) into socket on side of Control Box. A full charge will take up to 10 hours. Full battery should operate pump for several days (dependent on use).
- ** NB. Handle & Switch Handle height can be adjusted for comfort of user and can also be removed for ease of transportation.

 NB. For handle removal, disconnect 2 x bullet connectors inside control box (terminals are both common & not sided)

MAINTENANCE

- 1) During prolonged periods of non-use, the paint tank should be washed out manually and drained (using black rubber plug on rear of tank). Also clean the basket filter (in top of tank) and the paint filter (on end of paint suction tube)
- 2) Remove all 3 x plug-in connectors (2 on tank, 1 on spray hose coil) and lubricate with WD40 on a daily basis.
 - **NB.** When not in use, leave the 2 x tank connectors disconnected & clipped to the underside of the bonnet.
- 3) During prolonged periods of non-use, disconnect the spray hose coil.
- **4)** Keep control box interior free of water & paint. Remove any surplus / spillage by using small black rubber plug on the base of the control box.

Technical Information:-

Paint tank capacity: 25 litres

Water bottle capacity: 3.5 litres

Weight – Dry, no tank: 27 kg

ACCESSORIES - How to fit

1) Extended Spray Arm: Fit instead of standard spray arm, locate to the left or right

of machine. Re-fit spray head to clear the front wheel. If used at the end of bar to left side, an extended spray coil

hose may be required (available on request).

2) Hand Lance: To use the hand lance, first remove spray hose coil from

connector & connect hand lance. Turn on paint spray (as if spraying paint). Hand lance is then controlled by its own

trigger action.

NB. Choice of fan or straight nozzle.

NB. Take care not to operate spray switch with no connection, the male connector is **NOT** self-sealing.

3) **Twin Jet Nozzle:** Remove standard nozzle and replace, then operate spray

as normal.

4) Running Track Guide: Fit to spray bar mounting post (other side to spray bar).

Slide out until correct distance set between centre wheel

and centre of nozzle.

5) *Chemical Boom:* Remove complete spray bar and detach spray head from

connector. Attach the chemical boom L-shaped mounting brackets to both of the mounting posts on the GMX – using the double-box adapters provided (sided). Plug in to

connector. Spray as normal.

NB. Use of chemicals may require a separate paint tank to avoid cross-contamination. Available on request.

6) Running Track Double Spray Marker:

GMX PARTS LIST

Part No.	Description	
Metal Work		
1000X	Handle	
1001X	Spray Bar (standard)
